

Results for all countries

Last updated: 2020-06-20

Mortality data

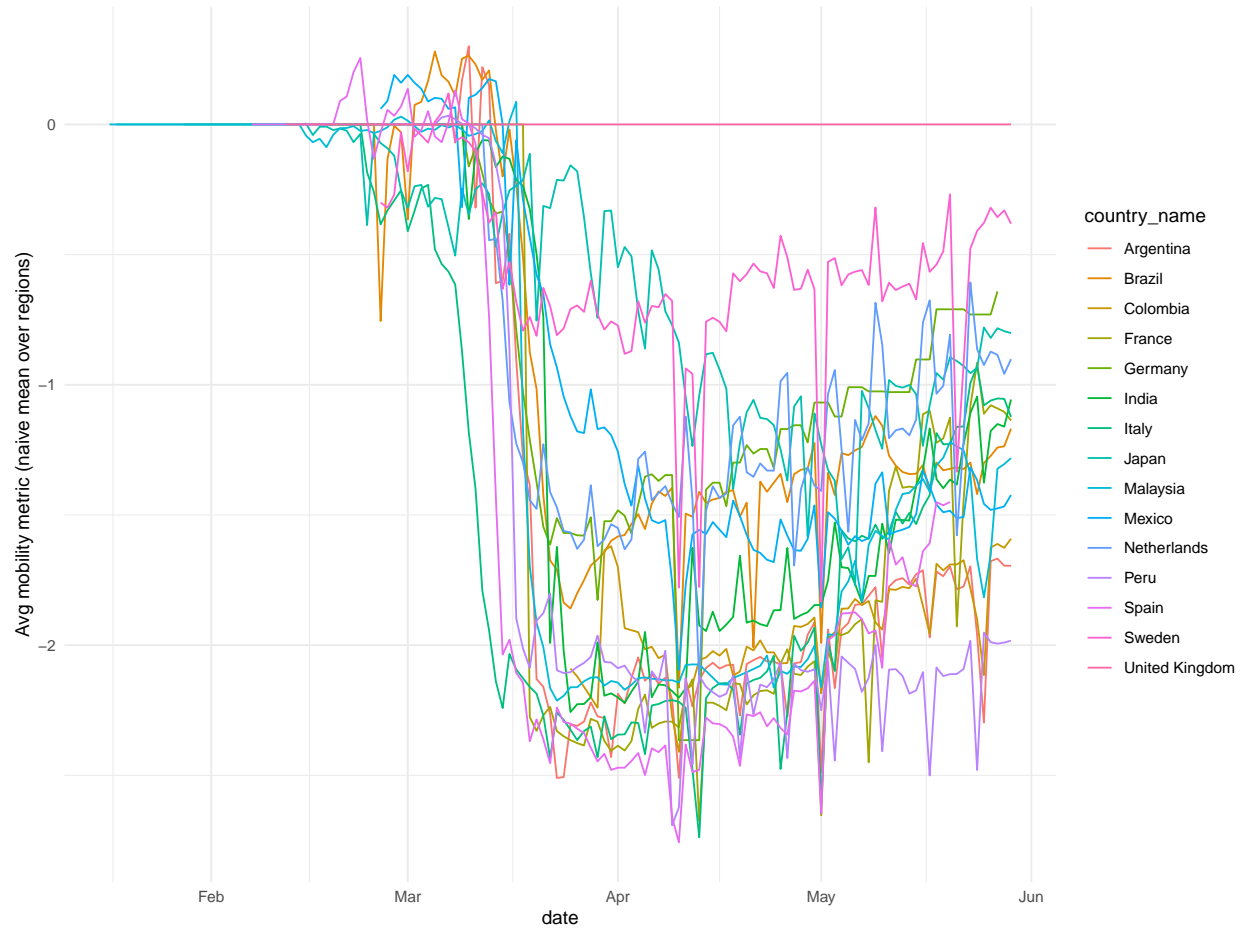

Japan and Malaysia will be fixed.

Mobility data

United Kingdom will be fixed.

Averaged mobility metrics per country
The model uses regional data (not shown).

R0 and imputed cases

Seeding and R0 for countries and regions

Each point is a mean Bayesian estimate for a single region.

'Seeded cases' are the estimated number of infections 30 days prior to 10th death.
Regions with low infection rates not included currently.

Beta coefficients with regions

Please ignore this output for now.
